

Presentation LMP Pro Series season 2020

The „LMP Pro Series“, as a high developed slotracing series, is designed with LMP Bolides, the prototypes of our time. The bodies are 1/24 scale representation of LMP1 and LMP2 Prototypes from the last 5 years (so for coming season until 2015).

After the 5th and best season ever in 2019, also in 2020 we want to offer ambitious slotracers a platform to drive these amazing cars in a challenging racing series.

For the new season, the concept of the LMP Pro Series will stay unchanged for the sixth year. Every event is divided in a day and a night race on Saturday and a second day race on Sunday. The LMP Pro Series cars are the fastest 1:24 modelcar / slotracing class, the demands on drivers and technology are correspondingly high.

The LMP Pro Series is established and generates great interest also outside of the participants. The regulations are proved, so fortunately big changes are not necessary. Again we have a special rule, to keep the grid more realistic and colourful. Top6 Championship Teams 2019 have to drive a top category car from LMP1 or DPI (no LMP2).

The steady development over the last 5 years, has made the chassis parts more light. The last season has shown that almost all teams start with minimum weight and a chassis ground plate significantly heavier than in the past. Therefore we decided to reduce the minimum weight by 5g for the 2020 season. The proven minimum body weight of 20g will be not changed. Only the whole car minimum weight is now 160g.

Dates:

03.04. - 05.04.2020 - Slotracing Mülheim - www.slotracing-muelheim.de

04.09. - 06.09.2020 - Slot 4000 / Hobby 2000 .- Liège / Lüttich

13.11. - 15.11.2020 - Renn-Center-Trier - www.renn-center-trier.de

The new documents for 2020 are online, changes are marked in green.

Inscription for new teams start at 11.01.2020.

Teams who drive the same car and teamname as last year have a pre-inscription option from 05-10.01.2020

Details in overview:

- LMP1, LMP2 and DPI Bodies with authentic livery of the last 5 years
- Body manufacturer free
- Chassis manufacturer free
- Minimum weight of body 20g,
- Material of body GFK, CFK, Resine, plastic
- Complete weight 160-175g
- Handout motors
- Handout and prepared DoSlot Wheels 47 Shore
- fixed gear transmission ratio

Kind regards,
Joachim, Gerd und Sebastian
